PROJECTS

Inventory Management System (React,Spring-Boot and Mysql)
3 Months Internship With Virtusa Corporation

- A complete Inventory Management Solution for companies who are looking for a elegant software to take their business to the next level.This web application uses React.js on the front end and spring boot on the backend with MySQL as the database.This project can manage several inventories with different products by giving the user the functionality to add,update,delete any product from any of the inventories and the user can also generate purchase orders and download reports based on the business performance.It also sends a alert if a product is low on inventory,giving a beautiful interactive ui to the user.

Real Time Object Detection Using YOLO v5)

This project aims to develop an real time object detection algorithm using You Only Look Once v5 algorithm which detects objects and assigns them into bounding boxes and also gives the co-ordinates of the object in That particular frame.

EDUCATION

10th Boards
Subhaspally Bidyaniketan(H.S)

💼 Passed With 88.62 Percentage 📍 2011-2017

12th Boards
Subhaspally Bidyaniketan(H.S)

💼 Passed with 86.6 Percentage 📍 2017-2019

Bachelor Of Technology
Electronics and Communication

💼 2019-2023

MY LIFE PHILOSOPHY

"Eager to learn new technologies and improve myself day by day."
